

LETS GET CREATIVE IN A CRISIS

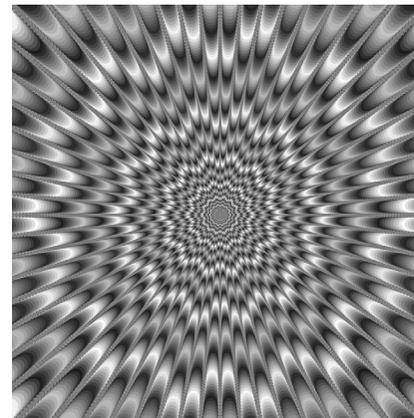

WEEK 7

MOVEMENT!

This week's theme is **Movement!** There are many ways that you can capture movement. In art, a simple but effective method for capturing movement in your art is to use suggestive brushwork which mimics the general movement and gesture. In photography, you can capture movement using different shutter speeds or maybe using a flash. You could even create movement in post production! You could capture water, cars or maybe your pets! Anything that moves!

YOUR TASK

Take 3-6 photos or create an artwork about inspired by movement. You could use a different techniques, settings and mediums.

SUBMITTING YOUR WORK

Please submit your work by next Sunday 7pm.

To submit, if you have created an artwork, please scan or take a photo of your work. Ensure that your photo is in a JPEG or PDF format and is under 10mb.

Similarly, photographers, please save your photos as a JPEG, ensuring they are no bigger than 10mb if sending via email.

If your photos and artwork are too big to send, please use wetransfer. See separate handout.

Please send your submissions to gemma.clark@gbmc.ac.uk

In your email, please include your name, equipment and techniques used, and your instagram or website (if you have one).

If you upload any work to instagram, be sure to tag me [@gemmaclarktutor](https://www.instagram.com/gemmaclarktutor) and use the hashtag [#letsgetcreativeinacrisis](https://www.instagram.com/letsgetcreativeinacrisis)

If you have any questions in the mean time, please let me know.

Looking forward to seeing all of your submissions!

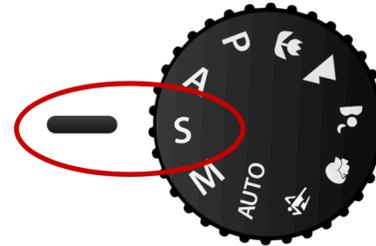

TECHNIQUE TO TRY - PANNING

To photograph while rotating a camera on its vertical or horizontal axis in order to keep a moving person or object in view.

Shutter speed

Shutter speed is an important aspect to panning therefore setting your camera to shutter speed priority mode is the best for this technique.

The actual shutter speed depends on the speed of your subject but it will generally be between 1/30 - 1/125. It also depends on how much motion blur you want.

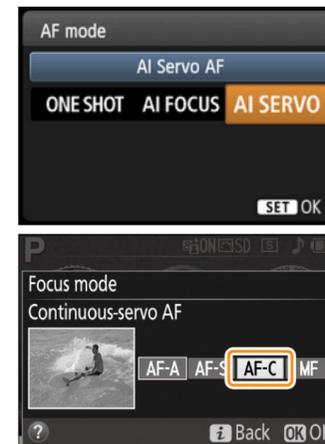

Auto-Focus

To begin with, it's best to use the automatic focusing technique when panning.

To make sure that you focus on the subject accurately, switch on the continuous focus tracking mode (AF-C on Nikon, and AI Servo for Canon).

This helps your camera to continuously focus on the subject as it moves across the frame.

Continuous Shooting Mode

By setting your camera to the continuous shooting mode, you will have a better chance of capturing the image.

As well as this, you will also minimise camera shake from pressing the shutter button.

Tips

Use a tripod - Use a tripod when photographing to help you achieve a clear subject. Position your camera so it is the same height as your subject.
